

Post- interview assessment Questions

1. Using Pluralsight or Udemy, design a database schema for a similar learning platform named SBSC-LEARN.
2. Populate the tables for User, Course & the Attempt of the courses by users with at least 100 rows of sample data from <https://mockaroo.com>
3. Create an asp.net core application to consume the database schema implementing course creation including file upload.
4. Create a page to list the users of the application that got the highest score in each course categories

Note:

Your tools should be: -

- Microsoft SQL Server as your database
- EFCore as your ORM
- <https://mockaroo.com> - to generate sample data
- <https://github.com> - to host your solution
